Additionally, IS 515 and IS 520 are exceptionally valuable in the daily work of an actuary.</p> <p>THE DISCIPLINE:</p> <p>An actuary is a statistician who analyzes the financial consequences of risk. Actuaries use statistics, mathematics, and financial theory to study uncertain future events, especially those of concern to insurance and pension programs. They evaluate the likelihood of those events and design creative ways to reduce the likelihood and decrease the impact of adverse events that do occur. Their work designing and managing programs that control risk requires a combination of strong analytical skills, business knowledge, and understanding of human behavior.</p> <p>CAREER OPPORTUNITIES:</p>	<p>Actuaries enjoy excellent job security, high incomes, and a low-stress work environment. Careers in actuarial science are consistently ranked among the top three professions. Competent actuaries are highly recruited and can have many professional opportunities. Actuaries are employed across a wide variety of industries and typically become established in one of the following career tracks: enterprise risk management, quantitative finance and investment, life insurance, health insurance, and retirement benefits. By focusing on development of data analysis skills, actuaries can also easily transition to business analytics settings</p> <p>ACTUARIAL EXAMS:</p> <p>Actuaries are required to demonstrate their proficiency by passing a series of competency exams offered by one or more of the principal actuarial societies. It typically takes 6-10 years to pass all of the exams; virtually all actuarial interns are required to have passed at least one of these exams as a condition for employment. The BYU Actuarial Science degree provides students with the opportunity to study significant portions of the material covered in the first five exams offered by the Society of Actuaries and accepted by the Casualty Actuarial Society (the two major actuarial societies in the United States).</p> <p>The correspondence between the actuarial exams and available BYU course work is roughly as follows:</p> <p>Exam P: Stat 240, 340, 372 (full coverage)</p> <p>Exam FM: Stat 274 (full coverage)</p> <p>Exam MFE: Stat 377 (about 90% coverage)</p> <p>Exam MLC: Stat 475 (about 50% coverage)</p> <p>Exam C: Stat 240, 340, 477 (about 90% coverage)</p> <p>In addition to the exams the societies accept the following sets of courses for the Validation by Educational Experience (VEE) credit:</p> <p>Applied Statistical Methods VEE:</p>
